

CLAIMS

1. A process for producing a polyorganosiloxane-containing resin, comprising mixing a polyorganosiloxane-containing resin containing 5% by weight or more of volatile
5 siloxane immediately after coagulation and dehydration with an organic solvent, and filtering the resultant mixture to decrease a residue in the resin.

2. The process for producing the polyorganosiloxane-containing resin according to claim 1, wherein the residue
10 is a volatile siloxane.

3. The process for producing the polyorganosiloxane-containing resin according to claims 1 and 2, wherein the organic solvent is an alcohol.

4. The process for producing the polyorganosiloxane-containing resin according to claims 1 to 3, comprising
15 mixing a polyorganosiloxane-containing resin after coagulation and dehydration with an organic solvent only once, and filtering the resultant mixture.

5. The process for producing the polyorganosiloxane-containing resin according to claims 1 to 4, wherein the
20 Calcium content of the resin is 300 to 1,000 ppm.

6. A polyorganosiloxane-containing resin produced by the process according to any one of claims 1 to 5.

7. A resin composition comprising a thermoplastic resin
25 and/or a thermosetting resin and the polyorganosiloxane-

containing resin according to claim 6.
